Rack Mount for Performance and Reliability

Software-defined-radio spectrum analyzer for remote spectrum monitoring of L-band signals in a versatile 1RU enclosure. Remote access over ethernet utilizing included Avcom's EVO-GUI software, or user-defined API. Provides system integrator and end-user total flexibility in configuration of many features such as, markers, shape alarms and recording. Robust hardware design based on field-proven years of experience provides a cost-effective yet reliable analyzer for many applications.

Versatile Remote Control Software

The EVO-RSA is designed for the measurement and analysis of communications and broadcast carriers, making Satcom link, L-Band carriers, easy to measure, monitor, and record. The EVO-RSA provides excellent uplink, downlink frequency and amplitude accuracy along with resolution bandwidth (RBW) selection from 1kHz to 1MHz. This is required to allow viewing and monitoring of Telemetry, Tracking, Command Systems (TT&C), data carriers found in many satellite systems, spread spectrum, and Wi-Fi as well. Variable reference levels (RL) from -10dB to -40dB make viewing of smaller to larger signals possible.

“Following the Signal”, and listening to our customers, this series is perfectly suited to provide functionality in earthstations, teleports, and RF signal monitoring environments. The EVO-GUI software pairs perfectly with all Avcom analyzers for demanding applications which require the extended performance characteristics, while still providing low cost-of-ownership and a highly cost-effective and reliable professional product.
